

Stimulated trials, artifact-aware (P12 · LVF · θ · frozen no-stim model)

A example stim trial, LVF01
(this trial: RMS 5.7x · median across trials 1.3x)

B frozen model error around stimulation
(θ filter smears artifact $\sim \pm 200$ ms)

C overall one-step R^2 barely moves
(stim-window error small vs total variance)
