

Brain as locally linear system: $x_{t+\Delta} = Ax_t + b + \hat{w}_t$ (P12 · LVF · theta power · MSIT)

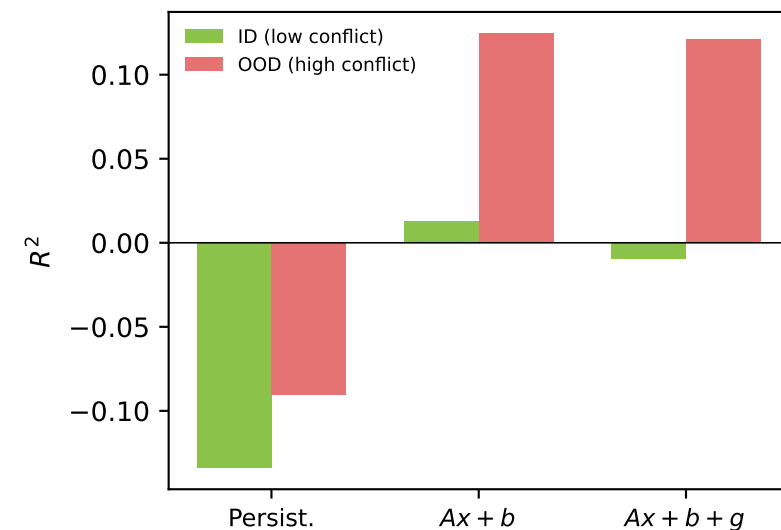

A Neural data & task context
MSIT · P12 · LVF lead, theta 4-8 Hz

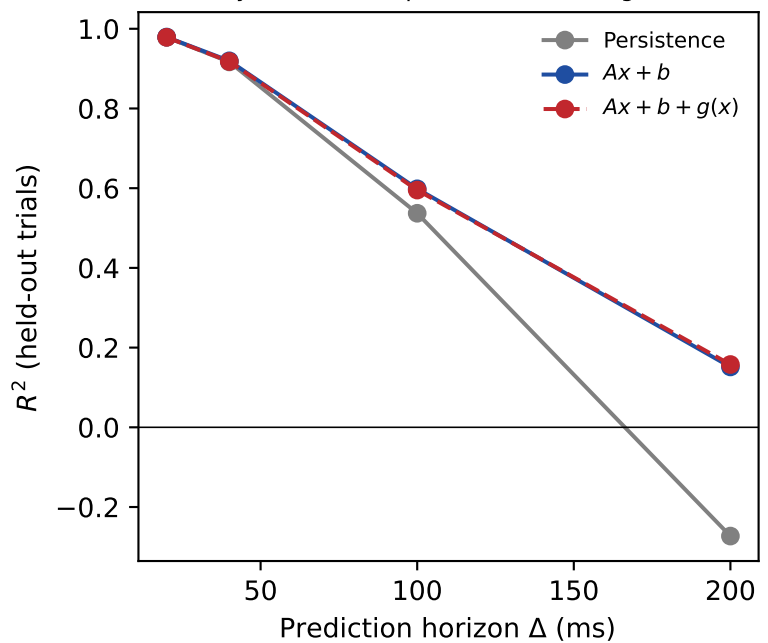

B Linearization in-domain (NS1, $\Delta=20$ ms)

C Context shift: low→high conflict
frozen model, $\Delta=200$ ms

Linear dynamics beat persistence at long horizons

Linearization TRANSFERS across conflict
(no OOD degradation — negative result)
